Ragni R402-6LPNL brick line and pins set features solid forged line pins are manufactured from one piece of steel, they are chrome plated and feature a bulbous shaft and increased striking head which enables the pins to hold increased line. The brick line is Nylon braided which wont fray when cut vs twisted line which does, the line is available separately in a various range of colours, however Hi-vis yellow is supplied in this pack. The Hi-vis colour really stands out on both brick and block work and allows the user to lay perfectly to the line. It is very strong, durable and possesses a high level of stretch which is required for long stretches of brickwork where increased torsion is required to avoid line sag. Often used in conjunction with corner blocks – check out the Ragni RCB-O2 or RCB-Y2!
